

## What is Transport for Leeds?

The Transport for Leeds study is looking at ways of tackling congestion in Leeds, through investment in better transport systems.

Metro and Leeds City Council will consult with members of the public and stakeholders to seek views and feedback on emerging ideas.

### Investment in new and improved transport

Transport for Leeds could result in a funding bid with the Department for Transport (DfT), from its Transport Innovation Fund to support any transport improvements identified by the study.

If Leeds bid is successful, the city could benefit from significant investment in new and improved transport.
